

ARTIFACT FABRICATION LLC

PRECISION. RELIABILITY. MISSION READY.

CAPABILITIES STATEMENT

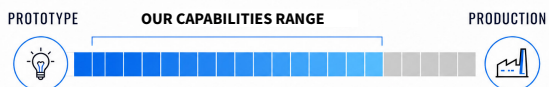

BUILT FOR SPEED, PRECISION, AND SCALE

Artifact Fabrication is a precision sheet metal and welded assemblies manufacturing partner built for modern industry. Founded around lean manufacturing principles and digital technology integration, our operational culture was designed for the future of manufacturing — not retrofitted from legacy processes.

Through continuous investment in advanced equipment, scalable systems, and workforce development, we deliver rapid, reliable, and highly traceable manufacturing solutions with the agility to support rapid prototyping through to production. Our digitally connected environment combines real-time visibility with clean workflows to support unusually fast turnaround times.

Built around high-mix manufacturing, we have standardized the process of doing something different every day — enabling fast adaptation to unique parts, changing requirements, and demanding production schedules without sacrificing quality or traceability.

Our team approaches every project with the same mindset: **Challenge Accepted.**
